The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-14 and 17-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kurz et al (US 6,489,388) in view of Sakurai et al (US 4,526,921).

The examiner interprets that the D component of claim 11 comprises melamine in view of the Decision by BPAI and applicant's amendment.

Kurz et al teach a molding composition comprising a polyoxymethylene homopolymer or copolymer, a polyalkylene glycol, zinc oxide in abstract, table 1 and claims 1-9. Kurz et al further teach employing stabilizers against the effect of heat at col. 2, lines 38-53.

The instant invention further recites melamine over Kurz et al. However, said melamine is one of art well known heat stabilizers for polyoxymethylene (polyacetal) as taught by Sakurai et al, col. 5, lines 20-49, col. 6, line 6 and tables 3, 4 and 7.

It would have been obvious to one skilled in the art at the time of invention to utilize the art well known heat stabilizer for polyoxymethylene (polyacetal), melamine, taught by Sakurai et al in Kurz et al since Kurz et al teach employing stabilizers absent showing otherwise.
